(54) Title: STANDARDIZED BINDING ELEMENTS

(57) Abstract: The invention provides a group of standardized plastic binding elements that include two, three, four, five, or seven fingers that are spaced along the spine at precise locations to accommodate the perforations spaced according to specific standardized loose-leaf hole patterns. The binding elements preferably have spines likewise corresponding to at least the length of specific standardized paper sizes, i.e., 8.27 inches, 8.5 inches, 11 inches, 11.69 inches, 14 inches, and 16 inches. The fingers of the binding elements either secure together or to the spine when in the closed position, or the binding elements are held in the closed position by other structure such that the binding elements may be utilized to bind a stack of standard, loose-leaf sheets without the use of a binding machine. Further, the invention provides a relatively small size binding element that may be utilized to provide a relatively small bound book wherein the pages can be turned without binding.

\* Special categories of cited documents:

\*A\* document defining the general state of the art which is not considered to be of particular relevance

\*E\* earlier document but published on or after the international filing date

\*F\* document which may throw doubts on priority claim(s) or which is used to establish the publication date of another document or other special reason (as specified)

\*G\* document referring to an oral disclosure, use, exhibition or other means

\*H\* document published prior to the international filing date but later than the priority date claimed

\*I\* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

\*X\* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

\*Y\* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

\*Z\* document member of the same patent family
